

Safeguarding your business critical data!

What is Online Data Backup?

Online backup, also known as cloud backup, offsite backup or remote backup, is a method of safeguarding your valuable files, folders, emails databases, virtual machines and the entire contents of a hard drive by regularly and safely backing up to a remote storage facility via a secure internet connection.

The benefits of our Online Data Backup service!

- No upfront capital expenditure
- Near zero human intervention
- Protects your data from prying eyes
- Not affected by flood, fire or theft
- Backups / restores are fast & accurate
- Scalable up or down in minutes
- All updates are automatic & FREE
- Affordable & value for money

Delivers true peace of mind!

How does it work?

Start protecting your valuable data in minutes!

Download

Software

Select files

& Configure

Time / Date

Schedule

Upload

Files

The whole process from time of sign up to the start of your first backup can be a matter of minutes. Once the small software client is downloaded to the target machine you follow a wizard that takes you through the simple setup.

After the files you want to back-up have been selected you set the time and regularity when you want the backup to run and then save your settings. After your backups have run you will receive a detailed email report.

Security is at the heart of everything we do!

- Data is encrypted prior to transfer
- Transfers are via an encrypted tunnel
- Data is encrypted while stored
- Data is encrypted during restoration
- Encryption keys are unique to you
- We adhere to UK data protection rules
- We continually perform intrusion tests
- ISO27001 accredited UK data centers

Where is your data held?

When using our service you can be sure that your data is always close at hand. We only use UK data centres, which means you know where your data is held and you also meet any of your industries regularity requirements. You can also call upon us to ship your data back quickly and safely in the event of a complete loss.
