

# PROVIDES HOSTED DESKTOP SOLUTIONS THAT ARE **SECURE, SCALABLE AND COST EFFECTIVE**

## What is a Hosted Desktop?

Basically, it is being able to access your desktop computer from anywhere in the world with a secure internet connection. All your files, data, applications are held in the cloud meaning you can remotely access whatever you need whilst being safe in the knowledge that your important information is being managed by specialist IT guys and stored in a high security data centre.

## Why should I move to a Hosted Desktop solution?

HOW WE CAN  
**HELP**

### HIGH-SECURITY UK DATA CENTRES

ISO27001 accredited UK data centres. Robust encryption and continuous monitoring, we are committed to safeguarding your data.

### MICROSOFT CERTIFIED ENGINEERS

The knowledge and expertise to customise a hosted desktop solution that is right for your business.

### DATA SECURITY

We can meet any additional industry specific security standards, install two-factor authentication and remotely erase data from mobile devices for absolute control and peace of mind.

### ACCESS ANYWHERE

Access all business applications and files from any internet enabled device, anywhere worldwide.

### BEST-IN-CLASS BACKUP & RECOVERY

Data is replicated in real time so there's no loss of service.

### FULLY MANAGED MIGRATION

Our migration will ensure there's no impact on your business. Running your new system parallel to your legacy system for a seamless transition.

### MICROSOFT OFFICE SUITE

Access all the latest versions of every business application you need, increasing productivity, embracing innovation and facilitating business growth.

# Benefits of a Hosted Desktop Solution:

- £ Eliminate the cost and aggravation of buying, running and maintaining your own server.
- 🔒 Your data is backed up automatically in high security and carefully controlled ISO20071 UK data centres.
- 🔄 Real time back up to secondary data centre that is regularly tested ensuring they work (people are often caught out by this and lose their data, even when they think they were backed up).
- 🔑 Complete control over what employees can access and set accessibility on a per user basis.
- ⚙️ Automatic updates ensure you are always running the latest software and applications, protecting you and your files.
- 📶 Experience little to no downtime where the system is unavailable; Cloud B2B provide 99.9% uptime for all cloud services.
- 🌐 Employees have access to everything they need wherever they need it and on any device
- 🪟 Keep using your business applications such as Microsoft Office, Outlook and Sage.
- ➡️ It's on demand. You can set up accounts for new users and order more storage space as and when required. It's lightning fast. We're talking minutes.

## Giving you peace of mind...

Our hosted desktop solutions massively improves data security and removes the risk of hardware failure. With your files sitting on a dedicated machine in a UK data centre with enterprise level firewalls, they are also duplicated and backed up. So if a failure occurs, it's never a problem. The backup will immediately cut across to its sibling, so there is no loss of service and no downtime. Moreover, your data is replicated in near real time over at another data centre – at a separate location – in case of unexpected events such as floods and fires. Every night your data is backed up again, and you can decide how many of these daily backups to keep.

## Build the right solution for you

Hosted Desktops can be tailored made for your business and you can easily add on different applications including:

- **Two factor authentications** – providing an extra layer of security to protect your all-important data. Two factor authentication is a comprehensive security solution that confirms the identity of all your users and ensures the health of their devices before they connect to your applications.
- **Mimecast** – integration with Outlook, Mimecast provides you with a secure email portal that scans all inbound emails for any potential threats. It will hold and allow you to view suspicious emails online keeping your network completely secure and minimising the possibility of an attack.
- **Office 365 suite** - Offering the complete Microsoft suite of products, we help you get the most out of your chosen technologies. Our dedicated team of Microsoft Certified Engineers has everything you need to design, build, deploy and manage a hosted desktop solution that is right for your business, and your budget.
